French metrology company, Terraillon, will be displaying its sleep quality devices at CES 2018. HOMNI is Terraillon's latest smart home product and connects to its dedicated application, Wellness Coach Sleep. Both will be on display at the show.

HOMNI is a suitable companion for a peaceful night's sleep and to wake up naturally feeling refreshed. Thanks to the sleep and wake-up programmes developed with the European Sleep Centre, HOMNI helps the user fall asleep in the best possible conditions with harmonious lighting as well as a cardiac coherence regulator to monitor stress in order to wake up feeling refreshed.

The data collected is then combined into the Wellness Coach – Sleep mobile application, which allows access to a complete dashboard and integrates temperature, humidity, sound and room brightness data. Sleep analysis is also provided, thanks to the Dot sensor (supplied with HOMNI).

In October HOMNI received the Grand Prix of Innovation at the Foire de Paris, in the Smart Home category. This award recognises the innovative design and technology of Terraillon's intelligent sleep solution.

HOMNI, accompanied by its 'Dot' sensor, will be available in the first quarter of 2018. The complementary 'Reston' sensor will also be available in Q1 2018.

Terraillon's latest innovations from their connected wellbeing range will also be on display at the stand: R-LINK, which is supposedly the world's thinnest impedance meter and NutriSmart, the first nutritional scale of its kind that automatically recognises food.
